

Bacteria resistant furniture from Buck & Hickman

Bacteria resistant furniture storage products are now available from Buck & Hickman, with the company offering BioCote coatings on its Roebuck Workline range.

Biocote is a patented anti-bacterial powder coating that inhibits the growth of both bacteria and fungi. This reduces the risk of cross contamination from surfaces with a high contact frequency.

Comments product manager Graham Blackburn: “ Although there is no substitute for correct cleaning practices, the incorporation of Biocote into the manufacturing process provides users of our products with the peace of mind that every effort is being made to maintain a hygienic working environment.

“Biocote is not an antibiotic and functions in a different way. It incorporates a silver based anti-microbial agent and to date no bacteria have become resistant to its coating.”

The Roebuck brand is exclusive to Buck & Hickman and offers a comprehensive range of over 20,000 tools, maintenance and health and safety products. Roebuck products are designed specifically for professional users working in demanding industrial environments.

Roebuck is unique in its combination of range, industrial quality and outstanding value for money. It offers a proven and effective solution for customers who need to reduce their overall purchasing costs but without compromising on quality or performance.
