

Hammering home a vision of the future

Buck & Hickman has launched a revolutionary new hammer which combines stunning looks with an ergonomic design.

The Dragon Hammer is available exclusively from the leading supplier of tools, maintenance and health and safety products and has a radical design to deliver significant improvements in both comfort and performance when compared to the traditional T shaped design.

The ergonomically designed handle improves posture and gives extra comfort in long periods of use. In addition a shock absorber built into the head helps to reduce vibration. The curved head also increases the hammers' overall effectiveness plus reduces the force needed to pull nails out of timber.

Kevin Thompson, Product Manager at Buck & Hickman, said: "The Dragon Hammer represents the first serious attempt to completely re-think the design of the hammer for many years. It may seem like a very basic product but for engineers or tradesmen who are using it everyday, improving comfort and reducing vibration can make a big difference and even prevent Repetitive Strain Injury. Not only does it have such an innovative design but the Dragon Hammer represents fantastic value for money."

The Roebuck Dragon Hammer is available in both 16oz and 20oz versions. For further information see page 63 of the 2008/09 Buck & Hickman catalogue or go to www.roebuck-tools.com.

The Roebuck brand is exclusive to Buck & Hickman and offers a comprehensive range of over 23,000 tools, maintenance and health and safety products. Roebuck products are designed specifically for professional users working in demanding industrial environments.
