

Faster, more accurate thread cutting from new Roebuck speed die

Buck & Hickman claims that crooked threads from using hand held die & die-stocks will become a thing of the past thanks to a new Roebuck die with integral guide. Called the Speed Die, it is also much faster to use than conventional dies.

The Speed Die is a completely integrated unit so there is no need to search for tools to install the die and make adjustments. In addition a guide in the die ensures quick starting and accurate cutting of the thread, even if a vice is not used. It has an ergonomic soft feel handle for better grip and control.

A complete set contains M3, M4, M5, M6, M8, M10 and M12 speeds dies and cutting oil in a strong moulded plastic storage case.

Comments product manager Philip Mayne: “Dies and Die Stocks have always been an integral part of a maintenance engineer’s toolkit. Thread cutting with dies has always been a fiddly job and has remained largely unchanged for decades. This is the first time that such a basic tool has been redesigned to make it simpler and better for purpose.”

The Roebuck brand is exclusive to Buck & Hickman and offers a comprehensive range of over 23,000 tools, maintenance and health and safety products. Roebuck products are designed specifically for professional users working in demanding industrial environments.

Roebuck is unique in its combination of range, industrial quality and outstanding value for money. It offers a proven and effective solution for customers who need to reduce their overall purchasing costs but without compromising on quality or performance.
